PROFESSIONAL SUMMARY

Results-driven Front-End Developer with 2+ years of professional experience designing and developing responsive web applications using React, Next.js, HTML5, CSS3, and JavaScript. Demonstrated expertise in translating graphical designs and wireframes into fully styled, production-ready markup code while maintaining cross-browser and cross-device compatibility. Proven track record of improving user engagement metrics by 18% and reducing page load times by 35% through performance optimization and modern development practices. Strong collaborator experienced in working with Creative, Business, Technology, and QA teams to ensure quality and punctual web development. Proficient in integrating backend APIs, implementing accessibility standards, and following SEO best practices. Skilled in debugging complex web applications and providing clear technical documentation.

TECHNICAL SKILLS

Front-End Technologies:

HTML5, CSS3, JavaScript (ES6+), TypeScript, React (2+ years production experience), Next.js, Responsive Web Design, Mobile-First Development, Cross-Browser Compatibility (Chrome, Firefox, Safari, Edge), Cross-Device Compatibility (Desktop, Tablet, Mobile)

CSS & Styling:

CSS Preprocessors (SASS, LESS), TailwindCSS, Bootstrap, Responsive Grid Systems, Flexbox, CSS Grid, CSS-in-JS

JavaScript Libraries & Frameworks:

React Hooks (useState, useEffect, useContext, useReducer), React Router, Next.js Routing, State Management (Context API, Redux basics)

Backend Integration & APIs:

REST API Integration, GraphQL (queries and mutations), JSON and XML data formats, JWT Authentication, Shopify API, WooCommerce API

Design Tools:

Figma (wireframe interpretation and design handoff), Adobe Photoshop, Adobe Illustrator, Design-to-code workflow

Development Tools & Practices:

Git, GitHub (version control), Browser Developer Tools (Chrome DevTools, Firefox Developer Tools), Debugging Tools (React DevTools, browser plugins), NPM, Yarn (package management), Webpack, Vite (build tools)

Databases:

MySQL, MongoDB, PostgreSQL, Firebase, Database integration via APIs

Deployment & Infrastructure:

Vercel, Netlify, AWS, cPanel, Hostinger, CI/CD basic workflows

Web Development Patterns & Practices:

Model-View-Controller (MVC), Component-Based Architecture, Object-Oriented Development, Progressive Web Applications (PWA), Web Accessibility Standards (WCAG), SEO Best Practices (semantic HTML, meta tags, structured data)

Methodologies:

Agile/Scrum Software Development, Sprint Planning and Task Estimation, Code Review and Pair Programming

Languages:

Spanish (Native), English (Intermediate B1 - reading, writing, conversation)

PROFESSIONAL EXPERIENCE

Full Stack Developer (Front-End Focused) | CodeINVEST

San José, Costa Rica | January 2024 – Present

Founded and currently lead CodeINVEST, a software development agency specializing in custom web applications for clients in Canada, Costa Rica, and international markets. Primary focus on front-end development with full-stack capabilities supporting 5+ production applications serving 10,000+ active users.

Front-End Development Responsibilities:

- Translated Figma designs and wireframes into fully styled, semantic HTML5 markup code for 5+ production web applications, ensuring pixel-perfect implementation and design consistency
- Developed responsive, mobile-first React components using modern JavaScript (ES6+) and TypeScript, implementing component-based architecture following industry best practices
- Implemented cross-browser compatibility solutions across Chrome, Firefox, Safari, and Edge, ensuring consistent user experience across all major browsers and versions
- Designed and developed cross-device compatible interfaces optimized for desktop, tablet, and mobile devices, testing across multiple screen sizes and resolutions
- Utilized CSS preprocessors (SASS) and utility-first frameworks (TailwindCSS) to create maintainable, scalable stylesheets with consistent design systems
- Integrated RESTful APIs and GraphQL endpoints to enable seamless data exchange between front-end and backend application layers
- Debugged and troubleshooted complex front-end issues using Chrome DevTools, React DevTools, and browser debugging plugins, reducing bug resolution time by 40%
- Optimized web application performance through code splitting, lazy loading, image optimization, and caching strategies, reducing initial page load times by 35%
- Implemented accessibility standards (WCAG 2.1 AA compliance) including semantic HTML, ARIA labels, keyboard navigation, and screen reader compatibility
- Applied SEO best practices including semantic markup, meta tags, structured data (Schema.org), and optimized heading hierarchy, resulting in 20% increase in organic traffic

Collaboration & Project Management:

- Collaborated closely with Creative, Business, Technology, and QA teams across 5+ concurrent projects to ensure quality deliverables and on-time project completion
- Participated in Agile/Scrum ceremonies including sprint planning, daily standups, sprint reviews, and retrospectives
- Provided accurate task estimates and constant progress status updates to senior developers and project leads throughout development cycles
- Maintained comprehensive technical documentation for all projects including component libraries, API integration guides, and deployment procedures
- Conducted code reviews for team members and provided constructive feedback following coding standards and best practices
- Communicated technical concepts effectively to non-technical stakeholders including clients and business teams

Key Projects & Achievements:

Laser Zone Arena (lazerzonearena.ca)

- Developed complete booking system front-end using React, implementing responsive UI components for customer booking flow and administrative dashboard
- Translated complex booking wireframes into functional interfaces with real-time availability checking and interactive calendar components
- Implemented PHP-based backend integration for MySQL database operations and JWT authentication system
- Optimized UI/UX flows resulting in 18% increase in booking conversion rates through improved form design and reduced friction points
- Reduced page load time by 35% through asset optimization (image compression, WebP format), lazy loading, and browser caching implementation
- Achieved Core Web Vitals targets (LCP < 2.0s, FID < 100ms, CLS < 0.1) through performance monitoring and optimization
- Deployed frontend on Vercel with automated CI/CD pipeline and backend on managed hosting with MySQL database

Cash of Grapplers (app.cashofgrapplers.com)

- Designed and developed Progressive Web Application (PWA) for QR-based event ticketing system using React and TailwindCSS
- Built responsive ticket scanning interface optimized for mobile devices, enabling offline functionality for real-time entry validation
- Integrated WooCommerce API to synchronize ticket purchases from existing WordPress e-commerce system with custom ticketing platform
- Implemented QR code generation and validation system processing 2,000+ event entries with real-time verification
- Created administrative dashboard with real-time metrics, attendee management, and event analytics using React and MongoDB
- Reduced check-in time by 50% through optimized scanning interface and efficient data validation workflows
- Collaborated with Sirius Dev team following Agile methodologies for enterprise-level sports event management
- Implemented responsive design patterns ensuring consistent experience across iOS and Android mobile browsers

Simacr PWA (app.simacr.com)

- Developed Progressive Web Application using React, Next.js, and TypeScript for internal inventory and customer management
- Implemented offline-first architecture with service workers enabling functionality without internet connectivity
- Integrated Shopify API for real-time inventory synchronization, product management, and order processing
- Built custom dashboards with data visualization components for inventory tracking and business intelligence

- Reduced synchronization errors by 30% through implementation of request queuing, retry logic, and error handling
- Accelerated warehouse picking workflow by 20% through optimized mobile-first interface design
- Deployed frontend on managed hosting and backend Node.js services on AWS infrastructure

CodeINVEST Website (codeinvestcr.com)

- Designed and developed agency portfolio website using Next.js, React, and TailwindCSS with focus on performance and SEO
- Implemented server-side rendering (SSR) and static site generation (SSG) for optimal page load speeds and search engine indexing
- Achieved perfect Lighthouse scores across Performance, Accessibility, Best Practices, and SEO categories
- Optimized Core Web Vitals with LCP under 2.0s and stable CLS through image optimization and font loading strategies
- Implemented structured data markup (JSON-LD) and semantic HTML improving search engine visibility
- Increased organic traffic by 20% within 3 months through technical SEO optimization and content strategy
- Created responsive design system with reusable component library and consistent brand guidelines

ExpediciónCR (expedicioncr.com)

- Developed responsive WordPress corporate website for tourism company using PHP, JavaScript, and custom CSS
- Customized WordPress themes and created custom plugins for dynamic content galleries and booking inquiry forms
- Implemented local SEO optimization including Google My Business integration, local schema markup, and geo-targeted keywords
- Optimized images and assets resulting in page load times under 2.5s on 3G networks through compression and CDN usage
- Achieved 15% increase in organic click-through rate through on-page SEO improvements and meta description optimization
- Ensured mobile-responsive design across all pages with touch-optimized navigation and call-to-action buttons
- Deployed on cPanel managed hosting with automated backups and security hardening

Technical Implementations:

- Implemented data exchange between front-end and backend using REST APIs with proper error handling, loading states, and data validation
- Developed reusable React component libraries following atomic design principles and component composition patterns
- Created custom hooks for data fetching, form handling, and state management improving code reusability across projects
- Implemented modern web design patterns including Observer pattern for state management and MVC architecture for application structure
- Utilized browser debugging tools and IDE debugging features to troubleshoot and resolve complex JavaScript issues
- Managed version control workflows using Git and GitHub including branching strategies, pull requests, and merge conflict resolution
- Configured build tools (Webpack, Vite) for optimized production bundles with code splitting and tree shaking

EDUCATION

Bachelor of Engineering in Computer Engineering | *In Progress (Expected 2026)*

Instituto Tecnológico de Costa Rica (TEC) | Cartago, Costa Rica

Relevant Coursework: Introduction to Programming (Python, Java), Data Structures and Algorithms I & II, Database Systems (MySQL, MongoDB, Oracle), Computer Architecture, Programming Paradigms (Object-Oriented, Functional, Logic), Compilers and Interpreters, Probability and Statistics, Discrete Mathematics, Calculus I, II, III, Physics I, II, III, IV, Differential Equations, Digital Design Workshop

ADDITIONAL TECHNICAL PROJECTS

University Development Projects | 2023 – 2024

EagleDefender-codeINVEST | Tower Defense Game

- Developed tower defense simulation game using Python with resource management and enemy AI pathfinding algorithms
- Implemented game loop architecture, collision detection, and state management patterns
- Released as open-source project with MIT license on GitHub

UbyTEC | University Administrative System

- Built full-stack administrative platform similar to Uber using JavaScript, Node.js, and Express
- Developed RESTful API backend with authentication and role-based access control
- Created responsive front-end interface for user management and system administration

BuscaMinas-Java | Minesweeper Game with AI

- Developed Minesweeper game in Java with competitive AI algorithm for optimal mine detection
- Implemented recursive algorithms for cell revealing and constraint satisfaction for AI decision-making
- Built graphical user interface using Java Swing with event handling and game state management

OdisseyRadio | Modular Radio System

- Created modular radio playback system in C with Makefile build automation
- Implemented audio streaming, playlist management, and system-level programming concepts
- Utilized shell scripts for deployment and configuration management

AirWarPruebas | Air Combat Shooter Game

- Developed aerial combat shooter game in Java with physics simulation and collision detection
- Implemented game engine architecture with sprite animation and user input handling
- Applied object-oriented design patterns for game entity management

Web Development Projects:

- **botw:** Interactive web interface inspired by video game UI using JavaScript, HTML, and CSS
- **TableTech/TableTech2:** Interactive table management system using Java with database integration
- **servidor:** Multi-client network server implementation in Java demonstrating socket programming and concurrent request handling

CERTIFICATIONS & ACHIEVEMENTS

- **Agency Founder:** Established CodeINVEST software development agency, managing client relationships and delivering custom web solutions to Canadian and Costa Rican markets
- **Cross-Functional Collaboration:** Successfully collaborated with Sirius Dev on enterprise-level ticketing system serving 2,000+ event attendees
- **Open Source Contributor:** Published multiple projects on GitHub with MIT licensing contributing to developer community
- **Agile Practitioner:** Consistently delivered projects on time and within scope using Scrum methodology across 5+ concurrent projects
- **Performance Optimization:** Achieved measurable improvements including 35% reduction in load times, 18% increase in conversions, and 20% growth in organic traffic
- **Production Experience:** Maintained 5+ production web applications serving 10,000+ active users with 99%+ uptime

PROFESSIONAL COMPETENCIES

Technical Problem Solving: Demonstrated ability to debug complex web applications, identify root causes of issues, and implement effective solutions using systematic troubleshooting approaches

Design Implementation: Proven experience translating design mockups and wireframes from Figma, Photoshop, and Illustrator into pixel-perfect, production-ready front-end code

Code Quality: Maintained clean, well-documented, and maintainable codebases following industry coding standards and best practices

Continuous Learning: Self-directed learner staying current with modern web development trends, frameworks, and best practices through documentation, online courses, and technical communities

Client Communication: Effectively communicated technical concepts to non-technical clients and stakeholders, gathering requirements and providing project updates

Time Management: Successfully managed multiple concurrent projects, prioritized tasks effectively, and delivered quality work within established deadlines

AVAILABILITY

- Open to remote, hybrid, or on-site positions
- Available for part-time or full-time roles
- Ready to start immediately
